Title of Invention: Heating System for Vehicle

This discloses a heating system for vehicle (on-board heater) mounted to a vehicle independently from an internal combustion engine but in operative association therewith. This heating system is provided with a heat exchanger recovering an energy obtained from a combustion gas from a combustor, a generator generating an electric energy from the energy obtained from the combustion gas and a power supply device for supplying the thus obtained electric energy to the on-board heater. At a time of heating the heater at the vehicle operation stop, the generator is operated by using a storage battery through a command from a control device and rotating an air compressor to introduce the air into the combustor. At the same time, the fuel is fed into the combustor for ignition.
